

Future-proof Your Business with FlexDev

FlexDev lives and breathes Agile software development. Agile is an approach to software development under which requirements and solutions evolve through the collaborative effort of self-organizing and cross-functional teams and their customers. We advocate adaptive planning, evolutionary development, early delivery, and continual improvement, and it encourage rapid and flexible response to change.

FlexDev are experts at driving the values, processes and principles derived from and which underpin a broad range of software development frameworks, including Scrum and Kanban.

A common characteristic in agile software development is the daily stand-up. In a nutshell, team members report to each other what they did the previous day towards their team's goal, what they intend to do today toward the goal, and any roadblocks or impediments they can see to the overall objective.

FlexDev Expertise

FlexDev uses specific tools and techniques, such as continuous delivery, automated unit testing, behavioural-driven development, modern design patterns, aspect-oriented programming, code analysis based refactoring and other techniques are often used to improve quality and enhance product development agility.

FlexDev focuses on leveraging cutting-edge technologies that are up to date with the latest trends and technologies. Polish people also are experts when it comes to Agile and Scrum methodologies for software development.

Agile

Deploy experienced Agile teams with FlexDev

IT leaders are looking for trained Lean Agile teams instead of individually sourced staffing to add capacity and enable them to deploy Agile teams quickly to add immediate value.

FlexDev's Agile / DevOps Applications solution provides trained agile development capabilities, with a focus on skilled teams that can be quickly deployed.
